

## ***ANOTHER SKY CLIMBER REFERENCE!*** ***Adriatic LNG Terminal: insulation of tanks***

The construction of new Adriatic LNG Terminal in Italy has been declared of national interest!

The Adriatic LNG Terminal will be installed offshore Rovigno, Italy and shall be ready for operation in 2008. The terminal will receive LNG from Qatar. The Adriatic LNG Terminal will be the first offshore terminal in the world!

\* Confined spaces

The construction of the LNG Terminal started in Algeciras, Spain. The LNG Tanks are designed and managed by Skanska Whessoe Ltd in Darlington, UK Tank Fabrication. For this project, a special designed narrow platform was required to operate between the concrete outer wall and the steel tank (inspection and insulation). Sky Climber designed, developed and manufactured 16 narrow platforms.

### **Application:**

All platforms are designed to travel on a monorail that goes round the tank and to operate in a very confined space \*. The Sky Climber platforms have been used to fill the space between to do insulation between the outer concrete wall and the inner steel wall of the tank with insulation material.

### **Scope of supply:**

14 special designed Light Weight Stage Platforms of 50cm wide of 2mtr long and 2 similar platforms of 50cm wide and 1mtr long, equipped with Sky Climber Compact 400 Hoists, Sky Grip Safety Device, over/underload, wirewinders and central control box.
